
Lower Hair Density Report

Problem Detected: Lower Hair Density

Hair appears thin, flat, and lacks volume due to weak or inactive follicles.

Made with GAMMA

Solution

PRP

Uses your own platelet-rich plasma to deliver concentrated growth factors to the scalp.
Helps control hair fall, strengthen weak roots, and improve overall follicle activity.

GFC

Uses concentrated growth factors to stimulate weak follicles and support natural regrowth, non-invasive therapy that supports scalp circulation and root strength.
Helps improve hair thickness, density, and overall hair quality over time.

Mesotherapy

Delivers essential nutrients directly into the scalp to improve nourishment where it is needed most.
Supports scalp health, improves root nutrition, and helps create a better environment for hair growth.

Hair Transplant

A procedure that moves healthy hair follicles from one area to the thinning or bald area.
It helps restore natural-looking hair growth in advanced stages of hair loss.

Combination treatment may be recommended.

Made with GAMMA

Stage & What You Should Do

Early Stage

What to do:
OLT + proper nutrition support.

Why this helps:
Helps improve hair thickness and strengthens weak roots.

Moderate Stage

What to do:
PRP / GFC treatments recommended.

Why this helps:
Helps increase hair density and improve regrowth.

Advanced Stage

What to do:
Hair Transplant for visible thinning areas.

Why this helps:
Helps restore lost hair and improve overall volume.
